

# EPCO: GROUNDING YOUR DATA CENTER'S FUTURE

SAFE. SECURE. GROUNDED.  
DISCOVER EPCO'S CUSTOM JUMPER KITS.

EPCO grounding jumper kits are designed to create secure, low-resistance electrical bonds between busbars, enclosures, and grounding points.

## Superior Equipment Protection & Signal Integrity

- **Low-Impedance Path:** EPCO jumpers provide a positive, low-impedance ground-fault current path, ensuring that fault currents are cleared quickly, and preventing damage to expensive servers and networking gear.
- **EMI/RFI Reduction:** By maintaining all metallic components (racks, cabinets, and enclosures) at the same electrical potential, these kits reduce electromagnetic interference, which is vital for high-speed data transmission.

## Significant Labor Savings (Prefab Advantage)

- **On a jobsite with hundreds of racks,** the "per-unit" time savings of a pre-fabricated kit adds up to days of saved labor.
- **Ready-to-Use:** Kits come pre-cut and pre-crimped using mechanical compression tools.

## Precision Engineering for High-Density Environments

- **Thread-Forming Screws:** The included zinc-plated screws create a secure bond without creating metal shavings.
- **Corrosion Resistance:** Manufactured with 6 AWG premium-grade (THHN) stranded copper wire and UL Listed components.

## Guaranteed Compliance

- **NEC Standards:** EPCO kits are designed to meet 2026 NEC Articles 250.24(B)(C) and 250.28(A). Using a UL Listed, factory-assembled kit provides inspectors with immediate proof of a compliant, high-quality installation.

EPCO offers custom grounding jumper kits to meet your specifications.
