EPCO prioritizes safety in all the products we manufacture. To eliminate risks and increase safety on the job site, we adhere to stringent industry standards and regulations such as:

- Safety Certifications and Standards:
 - UL and ETL Listings
 - National Electrical Code (NEC) Compliance
 - Additional Certifications depending on the product type
- Product-Specific Safety Features:
 - Grounding and Bonding
 - Fire-Resistant Materials
 - Clear Labeling and Instructions
 - Quality Control

LOWER YOUR EXPERIENCE MODIFICATION RATING (EMR)

EPCO's Electrical Solutions help improve safety, maintain OSHA compliance, and lower your Experience Modification Rate (EMR) through two key advantages:

- **Minimizing Fall Risks:** Our high-lumen, 277V-ready temp lights require fewer fixtures and circuits. This reduces the time contractors spend on ladders and working overhead.
- **Eliminating Rework:** TIGER XLs and TIGRESS Prefab units wire directly into junction boxes, eliminating the need to cut cords or rewire fixtures.

TEMP POWER BLOCK NEW PRODUCT!

- 50A, 125/250V, 12,500W, 4-wire, 60Hz.
- (6) 20A Duplex GFCI 5-20 Receptacles with circuit breakers.
- Durable & weather resistant NEMA 3R rated construction.
- USB Type A&C Hub.

The EPCO Power Block delivers safe, dependable temporary power on any job site. Grounded, weatherproof, GFCI-protected, load-rated, with easy to replace receptacles and breakers to keep your jobsite tools running and your crew protected.

CHOOSE EPCO. CHOOSE SAFETY.

Enhanced Safety & Hazard Mitigation

- EPCO's quality control processes ensure every product meets strict performance and quality standards.
- Install EPCO products with confidence, knowing they are engineered to minimize electrical hazards and withstand jobsite conditions.

Reduced Material Waste

- EPCO's prefab whips and grounding solutions streamline installation, meaning fewer scrap materials left on jobsites.
- Minimizing waste lowers chance of unsafe working conditions caused by excess debris.

Improved Project Management & Communication

- Prefabrication creates a controlled and predictable workflow, reducing stress on workers and supervisors.
- Clearer communication and standardized components mean fewer mistakes, which directly lowers the risk of safety incidents.

Safer Work Environment & Lower MOD Rating (EMR)

- By leveraging EPCO's prefabrication solutions, contractors can reduce worker injuries and improve overall job site safety.
- Fewer accidents contribute to a lower Experience Modification Rate (EMR), which benefits contractors through reduced insurance premiums and stronger reputations for safety.

EPCO products don't just make installations faster, they transform job sites into safer, more efficient environments where risks are minimized, workers are protected, and projects run smoothly.
