FOR IMMEDIATE RELEASE

EPCO's Second-Generation ProSeries™ LED Utility Luminaires Offer Unbridled Versatility

Cutting-edge technology and the Energy Star Rating makes the ProSeries ideal for environments where dust and moisture protection is needed.

MINNEAPOLIS, Oct. __, 2015—Engineered Products Company (EPCO), a supplier of specialty lighting and wiring consumable products for electrical contractors, announced today that it has released the next generation of its Energy-Star rated ProSeries LED Utility Luminaire™. Highly versatile luminaire offers unparalleled performance, improved efficacy, virtually no lumen maintenance, and is ideal for a variety of indoor, outdoor and wet locations.

"The second-generation ProSeries LED Utility Luminaire is an energy-efficient, cost-effective lighting solution designed to meet the needs of commercial, industrial and agricultural buildings where dust and moisture can reduce the longevity of luminaires," said EPCO President Jack Schuster. "It's the ideal lighting solution for everything from swine barns to storage areas and from athletic fields, tunnels, and walk-in freezers."

The newer, more advanced version of the ProSeries LED Utility Luminaire produces 1200+ lumens, the equivalent of 75 watts of incandescent lumen output, yet consumes only 15 watts of electricity. With a luminaire efficacy of 79 lm/W, the ProSeries provides dramatically better visibility at an affordable cost.

In addition, the ProSeries LED Utility Luminaire is dimmable down to 10 percent of its rated output. ETL listed, it meets UL 1598 Standards and operates in ambient temperatures ranging from -4°F to 113°F (20°C to 45°C). The ProSeries is easy to install and includes a five-year, 50,000-hour limited warranty.

"Another benefit of the second generation ProSeries LED Utility Luminaire—one that makes it ideal for wet locations—is silicone gaskets that protect against the ingress of moisture and dust," Schuster added. "And the innovative black "E" coat material on the luminaire's cast-aluminum heat sink will never rust or corrode—even in the harshest environments."

Rebates, both prescriptive and custom, are available to reduce overall installed cost; building owners and contractors should check with their electric utilities and co-ops to learn more.
